DIOLA SOKOLI

diolasokoli0@gmail.com | github.com/DiolaSokoli | diolasokoli.github.io | Prishtina, Kosovo

Final-year Computer Science and Engineering student seeking a backend or data engineering role, with hands-on experience building full-stack and backend applications with C#/.NET (ASP.NET Core, EF Core), FastAPI and React, designing REST APIs and relational databases, and shipping code with Git, Docker and CI/CD pipelines. Comfortable working across the stack, from backend services and databases to frontend and ML-powered features, and eager to learn and contribute in a professional engineering team.

TECHNICAL SKILLS

Languages: C#, Python, Java, JavaScript/TypeScript, SQL, C (basic embedded)

Backend & APIs: ASP.NET Core, EF Core, FastAPI, REST APIs, HTTP/JSON integrations, microservices architecture, Kafka, TCP/UDP sockets, RPC

Frontend: React, JavaScript/TypeScript

Databases: SQL Server, MySQL, Redis, relational data modeling and query writing

Tools & DevOps: Git/GitHub, Docker, GitHub Actions (CI/CD), JWT authentication, Grafana

Practices: Unit testing, agile/scrum, event-driven design, role-based access control

Data & AI: Pandas/NumPy, scikit-learn, TensorFlow, MLflow, Power BI

PROJECTS

Microservices E-Commerce Platform *FastAPI · React · Kafka · Redis · Docker · GitHub Actions*

- Built a FastAPI microservices backend (user, stock and notification services) with a React frontend, JWT authentication and a full CI/CD pipeline via GitHub Actions.
- Designed a real-time, event-driven notification system using Kafka to decouple services and handle asynchronous messaging.
- Added Redis caching, an ML analytics module tracked with MLflow, and Grafana dashboards for system and business metrics.

EstateIQ — Real Estate Management System *ASP.NET Core · EF Core · SQL Server · React · Redis*

- Contributed across the backend (ASP.NET Core, EF Core, SQL Server), the React frontend, and the ML price-prediction feature of a full-stack property management platform.
- Worked on JWT-based authentication for a multi-role permission system and Redis-backed caching for role-based dashboards.

Transport-Layer Client-Server Application *Java · TCP/UDP · RPC*

- Built a Java client-server app using TCP sockets and RPC, and a UDP-based CLI messaging tool, handling multiple concurrent clients with persisted session state.

Machine Learning Projects *Python · scikit-learn · TensorFlow*

- **House Price Prediction:** contributed to data cleaning, feature engineering and model code classifying King County homes into price bands, comparing Logistic Regression, KNN, Random Forest and a Neural Network, with K-Means for location-based clustering.
- **Spam Email Detection:** engineered and trained a Radial Basis Function (RBF) neural network classifier with a Python preprocessing and evaluation pipeline.

EXPERIENCE

IT Support Intern *Jul 2024 — Oct 2024*

U.S. Army — Camp Bondsteel, Ferizaj, Kosovo

- Built Power BI dashboards used by senior military leadership for data-driven operational decision-making.
- Led the migration of physical networking devices as part of a network architecture upgrade, improving reliability and operational efficiency.
- Resolved end-user help desk tickets, maintaining service continuity across the base network.
- Supported initiatives in cybersecurity hardening, process automation and early cloud computing adoption.

EDUCATION

B.Sc. in Computer Science and Engineering (Final Year) *2023 — Present*

University of Business and Technology (UBT) — Prishtina, Kosovo · Specialization: Data Engineering and Artificial Intelligence
